

ALPHA\$ - Test for Alphabetic Character

The ALPHA\$ merely tests if a character is alphabetic.

1. Invocation

To test a character code:

```
CALL ALPHA$ USING char
```

where *char* is a PIC X variable.

2. STOP Codes and Exception Conditions

No STOP codes are generated by ALPHA\$.

The following exception conditions may be returned by ALPHA\$:

EXIT code	\$\$COND	Description
1	1	The character is not in the range "A" to "Z" or "a" to "z".

3. Programming Notes

ALPHA\$ is only available with GSM SP-29, or later.

ALPHA\$ assumes a 7-bit character set.

4. Examples

None.

5. Copy-Books

None.
