

## **ANDD\$ - Logical AND Double-Words**

The ANDD\$ routine is available to perform a Logical AND operation on double-word values.

### **1. Invocation**

To perform a Logical AND operation on double-word values code:

```
CALL ANDD$ USING dword1 dword2 result
```

where *dword1*, *dword2* and *result* are PIC 9(9) COMP variables.

### **2. STOP Codes and Exception Conditions**

No STOP codes are generated by ANDD\$.

No exceptions are returned by ANDD\$.

### **3. Programming Notes**

Although the Logical AND operation is available using the \$AND commercial code operation this routine avoids the need for commercial code.

### **4. Examples**

[EXAMPLES REQUIRED]

### **5. Copy-Books**

None.

### **6. See Also**

None.
