ANDW$ - Logical AND Words

The ANDW$ routine is available to perform a Logical AND operation on single word values.

1.   Invocation

To perform a Logical AND operation on word values code:

```
CALL ANDW$ USING word1 word2 result
```

where *word1*, *word2* and *result* are PIC 9(4) COMP variables.

2.   STOP Codes and Exception Conditions

No STOP codes are generated by ANDW$.

No exceptions are returned by ANDW$.

3.   Programming Notes

Although the Logical AND operation is available using the $AND commercial code operation this routine avoids the need for commercial code.
