

B\$CTYP – Change Window Type

The B\$CTYP can be used to change the Speedbase Window Type on the fly.

1. Invocation

To change the Window Type code:

```
CALL B$CTYP USING window type
```

where *window* is the Window Definition of the target window; and *type* is a PIC 9(4) COMP field, or literal, which contains the new Type value.

2. STOP Codes and Exception Conditions

No STOP codes are generated by B\$CTYP.

No exception conditions are returned by B\$CTYP.

3. Programming Notes

This routine is only available with GSM SP-29, or later.

The following values for the *type* field are supported:

0	Normal window
1	Batch header
2	Information or Help window
3	Error window
4	Enquiry only window
5	Select/search window
6	Trailer window

Although all other values are invalid B\$CTYP does not perform any validation. All invalid values will produce unpredictable results.

4. Examples

None.

5. Copy-Books

None.
