B$CURR - Check Current Record

This routine checks window passed as a parameter to see if a current record is highlit, or if the cursor is on the last line of the screen.

1. Invocation

B$CURR is called as follows:

```
CALL B$CURR USING w-id
```

Where *w-id* is the two-character id of the window which may or may not have been displayed on the screen yet.

2. STOP Codes and Exception Conditions

No STOP codes are generated by B$CURR:

The following exception are returned by B$CURR:

EXIT code	Description
1	Window not yet displayed.
3	There is no current record.

3. Programming Notes

No exception indicates there is a current record and you will need to lock the record before entering the window.
