

B\$PLPB – Clear Extended PF Format Counter

This routine clears an internal field held within the BA\$XPF DLM. Use of this routine can avoid a STOP 25385 that may be generated in the BA\$XPF when massively complex combinations of PFs are used to generate a PDF report file.

1. Invocation

B\$PLPB is called as follows:

```
CALL B$SYNC
```

No parameters are expected or required.

2. STOP Codes and Exception Conditions

No STOP codes are generated by B\$PLPB.

No exceptions are returned by B\$PLPB.

3. Programming Notes

Although B\$PLPB can be used to avoid the STOP 25385 that may be generated by BA\$XPF under some obscure conditions, a possible side effect may be corruption of the generated PDF report file.

4. Examples

[EXAMPLE REQUIRED]

5. Copy-Books

None.

6. See Also

None.
