B$SYNC – Synchronise GX Type-Ahead Buffer

This routine synchronises the GX type-ahead buffer, effectively clearing the internal character buffer maintained by the GX client.

1.   Invocation

B$SYNC is called as follows:

```
CALL B$SYNC
```

No parameters are expected or required.

2.   STOP Codes and Exception Conditions

No STOP codes are generated by B$SYNC.

No exceptions are returned by B$SYNC.

3.   Programming Notes

A call to the B$SYNC routine (to clear the client-side type-ahead buffer within GX) normally follows a call to the CLRTA$ routine (to clear the server-side type-head buffer).

4.   Examples

[EXAMPLE REQUIRED]

5.   Copy-Books

None.

6.   See Also

CLRTA$ Clear server-side type-ahead buffer.
