CACND$ – Get Console Controller Code

The CACND$ routine is available to obtain the Console Controller Code.

1. Invocation

To obtain the Console Controller Code, code:

```
CALL CACND$ USING code
```

where code is a PIC 9(2) COMP variable into which the Controller Code is returned.

2. STOP Codes and Exception Conditions

No STOP codes are generated by CACND$.

The following EXIT codes may be returned by CACND$:

EXIT code	$$COND	Description
23101	1	Unexpected error returned by the Console Executive.

3. Programming Notes

CACND$ is only available for use with GSM V8.1l, or later. The returned code will be:

 1   Program is running on the GLOBAL.EXE fat client
 2   Program is running on a serial screen via the Serial controller
 3   Program is running on GSMWIN32 or GX via the Network controller
