

CPM\$ - Read User Details From Contract Protection Message

The CPM\$ routine is used to obtain the User Details from the global.lic file.

1. Invocation

To read the User Details from the global.lic file code:

```
CALL CPM$ USING area
```

where *area* is a PIC X(960) field into which the User Details are returned.

2. STOP Codes and Exception Conditions

The following STOP codes may be generated by CPM\$:

STOP code	Description
5701	The global.lic file is invalid.

No exception conditions are returned by CPM\$.

3. Programming Notes

CPM\$ is only available with GSM SP-16, or later.

The PIC X(960) area is defined as follows:

```
01 X-AREA
02 Y-AREA OCCURS 16 PIC X(60)
```

For a correctly generated, valid end-user configuration the 8'th PIC X(60) element of the array contains the User Name details prefixed by the 3 characters "by ":

"by *licenced_user_name*"
