

## **ENVNO\$ - Return 32-bit Stacked Environment Number**

The ENVNO\$ routine is used to return the number (depth) of the Stacked Environment created by the NEWEV\$ routine.

### **1. Invocation**

To return the number of the NEWEV\$ Stacked Environment code:

```
CALL ENVNO$ USING number
```

where *number* is a PIC 9(4) COMP field into which the NEWEV\$ Environment Number is returned.

### **2. STOP Codes and Exception Conditions**

No STOP codes are generated by ENVNO\$.

No EXIT codes are returned by ENVNO\$.

### **3. Programming Notes**

ENVNO\$ should only be used by GSM System Routines.

### **4. Examples**

[EXAMPLE REQUIRED]

### **5. Copy-Books**

None.
