GXAPV$ - Set Application Version Text

The GXAPV$ routine is available to set the GX Application Version Text, as displayed by the Help/About box.

1.   Invocation

To set the GX Application Help Text code:

```
CALL GXAPV$ USING text
```

where *text* is the text-string **WHICH MUST BE TERMINATED WITH A BINARY ZERO** (i.e. a byte of LOW-VALUES).

2.   STOP Codes and Exception Conditions

The following STOP codes may be generated by GXAPV$:

STOP code	Description
23926	GXAPV$ has been called by an application that is not running on GX.
23927	String too large for internal buffer
23928	An attempt was made to call GXAPV$ on an incompatible version of GX. The version of GX must be V2.7, or later.
23929	An unexpected error has been reported by GX

The following EXIT codes may be returned by GXAPV$.

EXIT code	$$COND	Description
23922	22	Unable to allocate memory for temporary work buffer

3.   Programming Notes

GXAPV$ is only available when running on GX. Any attempt to use GXAPV$ on a non-GX terminal will result in a STOP code.
