GXERC$ - Change GX Error Message Caption

By default the caption on the Windows message box displayed by the ERROR function is "Error". The GXERC$ routine can be used to change the default text.

1.   Invocation

To change the default caption text code:

```
CALL GXERC$ USING text
```

Where *text* is a zero-terminated text-string.

2.   STOP Codes and Exception Conditions

The following STOP codes may be generated by GXERC$:

STOP code	Description
23992	The Caption Text is too long (or not terminated by a byte of binary zero).
23993	An attempt has been made to call GXERC$ on a non-GX screen.

The following EXIT codes may be returned by GXERC$.

EXIT code	$$COND	Description
23951	51	There was insufficient memory available to allocate the work data area for the GXERC$ routine.

3.   Programming Notes

GXERC$ is only available when running on GX. Any attempt to use GXERC$ on a non-GX terminal will be ignored.
