

GXFOL\$ - Return the GX Folder

The GXFOL\$ routine is available to return the GX folder i.e. the current Windows folder for the running GX executable.

1. Invocation

To obtain the current GX folder code:

```
CALL GXFOL$ USING folder_name
```

where *folder_name* is a PIC X(256) field into which the zero-terminated folder name is returned.

2. STOP Codes and Exception Conditions

The following STOP codes may be generated by GXFOL\$:

STOP code	Description
14203	GXFOL\$ has been called by an application that is not running on GX.

The following EXIT codes may be returned by GXFOL\$.

EXIT code	\$\$COND	Description
14212	12	GX was unable to obtain the current folder name

3. Programming Notes

GXFOL\$ is only available when running on GX. Any attempt to use GXFOL\$ on a non-GX terminal will result in a STOP code. GXFOL\$ is only available with GX V4.7o, or later. Any attempt to use GXFOL\$ on an earlier version of GX will result in an exception. Furthermore, GXFOL\$ is only available with GSM SP-35, or later.
