

GXGUN\$ - Get Windows User Name from GX PC

The GXGUN\$ routine can be used to obtain the Windows user name from the GX PC.

1. Invocation

To obtain the Windows user name code:

```
CALL GXGUN$ USING name
```

where *name* is a PIC X(100) field into which the zero-terminated Windows user name is returned.

2. STOP Codes and Exception Conditions

The following STOP codes may be generated by GXGUN\$:

STOP code	Description
14203	GXGUN\$ has been called by an application that is not running on GX

No exceptions are returned by GXGUN\$.

3. Programming Notes

GXGUN\$ is only available when running on GX. Any attempt to use GXGUN\$ on a non-GX terminal will result in a STOP code.

The Windows user name is terminated with a byte of binary-zero. The remainder of the PIC X(100) field is SPACE filled.

4. Examples

[EXAMPLES REQUIRED]

5. Copy-Books

None.
