

ORB\$ - Logical Inclusive OR Bytes

The ORB\$ routine is available to perform a Logical Inclusive OR operation on single byte values.

1. Invocation

To perform a Logical Inclusive OR operation on byte values code:

```
CALL ORB$ USING byte1 byte2 result
```

where *byte1*, *byte2* and *result* are PIC 9(2) COMP variables.

2. STOP Codes and Exception Conditions

No STOP codes are generated by ORB\$.

No exceptions are returned by ORB\$.

3. Programming Notes

Although the Logical Inclusive OR operation is available using the commercial code operations this routine avoids the need for commercial code.

4. Examples

[EXAMPLES REQUIRED]
