

# **Global 32-bit Development System System Subroutines Manual Version 8.1**

## ? 32-bit Subroutines

### ?.? STCAT\$ - Simple String Concatenation

The STCAT\$ routine can be used to concatenate 2 string.

#### ??.1 Invocation

To concatenate two text strings together code:

```
CALL STCAT$ USING string1 string2 string3
```

where: *string1* is a pointer to string to be appended  
*string2* is the string that *string1* will be appended to  
*string3* is the destination string

#### ??.2 Exception Conditions

The following STOP codes may be generated by STCAT\$:

STOP code	Description
????	????

The following EXIT codes may be returned by STCAT\$:

EXIT code	\$\$COND	Description
????	?	Combination of string1 and string2 would exceed the limit of string2
