WDATE$ - Get Current Date From Windows

The WDATE$ routine obtains the current date directly from Windows.

1.   Invocation

To get the current Windows date code:

```
CALL WDATE$ USING wd
```

where *wd* is a control block of the following format:

```
01    WD
  02   WDDAY      PIC 9(2) COMP           * Current day
  02   WDMONTH    PIC 9(2) COMP           * Current month
  02   WDYEAR     PIC 9(4) COMP           * Current year
  02   WDDOWK     PIC 9 COMP              * Current day of week (0=Sun,1=Mon)
```

2.   STOP Codes and Exception Conditions

No STOP codes are generated by WDATE$.

The following EXIT codes may be returned by WDATE$:

EXIT code	$$COND	Description
1	1	Unexpected error returned from SVC 61. The Windows error code is available in the $$CRES System Variable.

3.   Programming Notes

WDATE$ is only available with GSM SP-41, or later.

4.   Examples

[EXAMPLE REQUIRED]

5.   Copy-Books

None.
