WDFNO$ – Return Field Number in Window

The WDFNO$ is available to return the number of a field within a Speedbase window.

1. Invocation

To return the number of a field within a Speedbase window code:

        CALL WDFNO$ USING window field_name index_number field_number

where window is Window control block, field_name is a PIC X(6) variable, or literal, containing the target Field Name, index_number is PIC 9(4) COMP variable, or literal, containing the occurrence of the field name; and field_number is a PIC 9(4) COMP variable into which the Field Number is returned.

2. STOP Codes and Exception Conditions

No STOP codes are generated by WDFNO$.

The following EXIT codes may be returned by WDFNO$:

EXIT code	$$COND	Description
15201	1	The Speedbase window does not contain a Symbol Array.
15202	2	The Window Name is not present in the Symbol Array.

3. Programming Notes

WDFNO$ is only available for GSM SP-7, or later. WDFNO$ is highly specialized and is reserved for internal use only.
